1st CIO ADVANCED SPINE COURSE

25-26th March 2017

Dear Friends

Advancements in health care are reaching newer heights to decrease the sufferings of mankind. Spinal problems form a major chunk of the musculoskeletal diseases, which reach us in the tertiary health institutes. Spinal deformities are a complex problem with newer techniques coming in for its correction.

Delhi Orthopaedic Association has been conducting regular courses and workshops to enhance the knowledge and skills of its members. CIO Department of Orthopaedics, Safdarjung hospital is conducting this first ever course on Spinal Deformity Correction.

The "CIO Advanced Spine Course" will be a not to miss event for surgeons already initiated into spine surgery and desiring to learn deformity correction. In this two-day event the first day will focus on live surgeries, lectures and discussions through case presentation. The second day will focus on hands on cadaveric experience for deformity correction, training delegates on subtraction osteotomy and Ponte osteotomy.

The course would be open to delegates who are already initiated into spine surgery and there would be a limit of 20 seats to the course. First four registered delegates would get the opportunity to scrub with the stalwarts in the live surgery cases. So hurry and grab your chance.
